Biofeedback Accessories

The first biofeedback accessories made specifically for use with your sauna.

Featuring ANT™ technology to wirelessly capture heart rate & calories burned and then transfer to mysunlighten.com. ANT™ is advanced wireless technology used in the medical industry as it is the most reliable and efficient.

The world's first bio-feedback-enabled infrared saunas

- Accessories measure heart rate & calories burned (plus steps taken outside the sauna)
- Data transmitted to a personal wellness website, where progress can be tracked
- Now you can work towards health goals individually or within a community, all while enjoying utmost comfort

Data Drive:

Similar to a thumb drive, this plugs into your computer and wirelessly receives heart rate & calorie expenditure from your sauna (& running) sessions and uploads them to your profile on mysunlighten.com

Intelli-Watch:

It calculates heart rate, calories burned, length of session and even tells time! It can be used inside the sauna to communicate with the mPulse's LCD interface and heart rate monitor, or outside with the running sensor.

Heart Rate Monitor:

The cushioned narrow belt comfortably straps around your chest to track your heart rate increase while you relax in your Sunlighten Sauna.

Running Sensor:

You can now integrate your out-of-sauna workouts with your sauna sessions, tracking both on mysunlighten.com. This digital pedometer affixes to your shoe and tracks speed and distance when walking or running.
